ARKANSAS, Southeast

(AR-Z074) ASHLEY, (AR-Z075) CHICOT

10/01/10 00:00 CST 10/31/10 23:59 CST 0 0.60M Drought

Very dry conditions continued across southeast portions of Arkansas during most of October. There were some rains that came late in the month which provided some temporary relief. Rainfall amounts ranged from a half to one and half inches with locally higher amounts. Most locations were 1 to 3 inches below normal for the month. The dry stretch resulted in severe(D2) to extreme(D3) drought conditions. Crops were put under stress under the warm and dry conditions. The likely impact will be less crop yields for harvest time.

Status of drought across AR for Oct, 2010.

A couple of trees and a power line were down off of Highway 134.

A potent weather system, for late October, impacted our region and brought a round of showers and thunderstorms to the forecast area on October 24th and 25th. This system produced severe weather across a good portion of the South with nearly 300 severe weather reports stretching from Texas to northern Georgia. Across the NWS Jackson forecast area, a number of these storms reached severe limits for locations north of Interstate 20 and primarily produced damaging winds. A few additional instances of hail and flash flooding also occurred.

FRANKLIN COUNTY --- 3.0 ENE WINNSBORO MUNI ARPT [32.16, -91.65]

 10/27/10 17:04 CST

Numerous tree limbs and a tree were blown down east of Winnsboro.

The combination of a frontal boundary, a very moist air mass, and sufficient instability, provided the ingredients necessary for an isolated severe storm to occur over Franklin Parish during the late afternoon of October 27th.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Very dry conditions continued across central Mississippi during most of October. There were some rains that came late in the month which provided some temporary relief. Rainfall amounts ranged from a half to two inches with locally higher amounts. Most locations were 1 to 3 inches below normal for the month. The dry stretch resulted in severe (D2) drought conditions to expand during the month with even the portions of extreme (D3) drought conditions expanding as well. Crops were put under stress under the warm and dry conditions. The likely impact will be less crop yields for harvest time.

Status of drought across MS for Oct, 2010.

Trees and power lines were reported down.

A potent weather system, for late October, impacted our region and brought a round of showers and thunderstorms to the forecast area on October 24th and 25th. This system produced severe weather across a good portion of the South with nearly 300 severe weather reports stretching from Texas to northern Georgia. Across the NWS Jackson forecast area, a number of these storms reached severe limits for locations north of Interstate 20 and primarily produced damaging winds. A few additional instances of hail and flash flooding also occurred.
